

# SENSORIZATION OF MSW CONTAINERS

Comprehensive management system in real time of the filling level of the city's containers for route optimization.

## Container filling monitoring

- The radar-type sensor **detects periodically** and **sends the information** if necessary.
- The information is transmitted to the servers using the **5G network**.
- With **photovoltaic technology** for unlimited charging from outside.
- Capable of sensing through **plastic materials**.

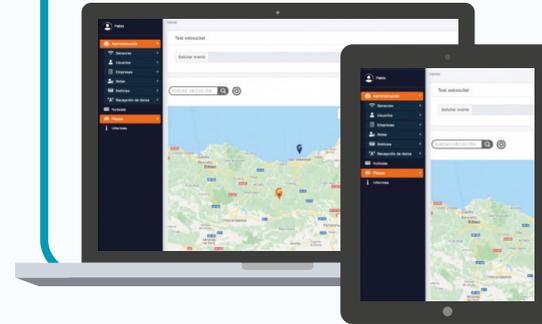

# Eco City

- **Reduce Km**, fuel, noise and number of operations necessary for the **collection of MSW**.
- **Immediate view** of full containers to increase or decrease the number of collections.
- Integration with **third party software or applications**.

## Remote management application

**24/7 access** to real-time information on the fill level in containers for glass, liquids, paper, textiles, construction debris or any other waste.

- Management of collection routes.
- Alerts on maximum level reached.
- Filling and optimization graphs.
- Monitoring kg CO2 not emitted.

# TECHNICAL SPECIFICATIONS

## OPERATING CONDITIONS

Work temperature	-20°C a 65°C
Humidity range	10% a 95%
Resistance to mechanical influences	High tonnage and pressure washing

## COMUNICATIONS

Communications module	BLE 5.0 LE
Cat NB1 / BG96	B1 / B2 / B3 / B4 / B5 / B8 / B12 / B13 / B18 / B19 / B20 / B25 / B28
Compatibility	Global
connectivity range	Ilimitado
Security	VPN Point to point SHA-2
bluetooth-link	2.4 GHz radio, TX +8 dBm
detection sensor	Radar
detection height	0 a 80cm
Detection reliability	95%

## COMPONENTS

Drums	4 lithium batteries 3.6V
Duration	Hasta 2 años
Envelope	IP67 JK10   PA6 GF35

## INSTALATION AND MAINTENANCE

Facility	Screwed or glued
Maintenance	Not required
Updates	OTA / Bluetooth
Substitution	Easy change of batteries by unscrewing the base
Available colours	

Technical data subject to possible modifications without prior notice.
